

ExaFlash® One - Qualified SSDs

100% Open, 100% Freedom

Legacy enterprise storage array vendors have a “no way” policy when it comes to supporting third-party SSDs. Why? This approach locks you into buying everything from them at outrageously inflated prices (often 10x or more). As a result, enterprise-class flash storage is more expensive than it needs to be. Nimbus Data is the force for good against this dark side. ExaFlash arrays give you the freedom to add your own qualified SSDs. Of course, we are happy to offer you ExaFlash arrays “turnkey” with SSDs included, but knowing you have the freedom keeps us honest and gives you the peace of mind to know that pricing will always be fair.

SSDs Currently Qualified for ExaFlash One (running SW release 141 or later)

KIOXIA
